

THE N°1 SOLUTION

# FOR SECURITY ORGANIZATIONS

TASSTA offers a solution that optimizes deployment of security guards and hence improves general performance of security companies working in different locations. Low latency calls and data transfer are must-have features for security companies when selecting a communications technology. For this reason TASSTA complies with 3GPP standard and is certified with FirstNet (USA) and DGUV (Germany). We support all the newest devices and regularly test them for compatibility with the TASSTA products and our quality standards for iOS and Android.

**EMERGENCY COMMS**

## OUR SOLUTION

TASSTA offers security companies a comprehensive communication system that provides their employees a reliable communication tool that contributes to their work and safety conditions. TASSTA solution is fully-compatible with most of the currently used devices, user-friendly, flexible and affordable in terms of adding (or removing) new features. When facing an emergency situation, it is challenging to get instantly connected to the right organizations and people, TASSTA makes that an easy process that can be preconfigured.

### Mission Critical Push-to-talk

Push-To-Talk functionality is the main driver for mission critical communications. It is easily accessible from any device, whether it is an analogue button on a radio, or a button on a touch screen of a phone. The PTT button can be supplemented with a video function and also can connect a guard to an individual or a group of users.

### Video Communication

TASSTA made it possible to implement video functionality into almost every feature. It can be used in individual, group and/or conference calls. Emergency and regular PTT calls can feature video as well. Moreover, it is possible to remotely turn on the guard's camera to check the surroundings in an emergency situation when the user is not responding.

### Emergency Communication

The outcome in an emergency situation highly depends on the coordination among all the involved users and dispatch. It is important to provide the guard with secure and reliable emergency notification tools. TASSTA's emergency solution is highly customizable to cover every possible operational requirement. The guards may use the option of "Covert emergency" when triggering an emergency should not be revealed to a third party. It is also important that the user's device initiates emergency calls itself in case when the sensors detect preconfigured dangerous conditions, like man down, idle position or absence of regular status messages updates.

### Lone Worker Protection

A combination of emergency solutions and localization features developed by TASSTA.

#### EMERGENCY SOLUTIONS

Alarm notifications based on status messages and sensor detections:

- Man down position
- Fall detection
- Idle position/movement
- Battery alarm

#### LOCALIZATION FEATURES

Can be used individually and in any combination:

- Outdoor and Indoor Localization
- Geofencing
- Guard Tour
- Task Manager with NFC
